Your partner for genuine used
CFM56* spare parts

cfmmaterials.com

*CFM56 engines are a product of CFM International, a 50/50 joint company between Snecma (Safran) and GE.

cfm materials

Formed as a 50/50 joint venture between GE and Snecma (Safran) in 2010, CFM Materials LP is the world's largest provider of used serviceable material for CFM56 engines, serving airlines and MRO shops around the globe.

Engines maintained with genuine OEM parts and repairs can retain as much as 50% higher residual value compared to engines which have been overhauled using parts and repairs provided by non-Type Certificate Holders.

Authorized parts from CFM Materials, including Life Limited Parts (LLPs), help airlines keep costs in check. In addition, installing genuine used serviceable CFM56 parts facilitates operator compliance with all CFM warranties, including participation in the company's TRUEngine™ program.

CFM International is the world's leading supplier of commercial aircraft engines. The company has delivered more than 26,000 CFM56 engines to more than 530 operators since the first engines were delivered in 1982. CFM develops, produces, and sells the CFM56 product line, the best-selling engine in commercial aviation history and has made the CFM56 family the engines of choice for single-aisle aircraft, including the Airbus A320 and Boeing Next-Generation 737 families.

CFM Materials operates worldwide through warehouses in Grand Prairie (TX, USA), Amsterdam (Netherlands) and Singapore, and through sales offices in Singapore and Cardiff (Wales, UK).
